Orji Onyinyechi

FRONTEND DEVELOPER

OBJECTIVE

Proven ability to collaborate effectively with other team members while spending time being mentored. Ready to apply my passion for coding to a talented engineering team to develop quality solutions.

EXPERIENCE

CHATTER APP

June 2023 – July 2023

In this age of pictures, hashtags, Reels and TikTok, likes and comments, a traditional bookworm's heaven would be a blog to get access to more text-based content. Chatter aims to be that heaven specifically for this kind of audience. A multi-functional platform where authors and readers can create and have access to their own content, it allows users to register and create their own account, it provides a rich text editor that allows users to easily create and publish their own content and also allows addition of photos and videos to enhance contents.

GIT APP

Mar 2023 – April 2023

This App is a Vue js application that fetches GitHub repositories using an Api endpoint which shows list of all git repositories when you input your username and login. When you click on a particular repository, it shows data of the particular repository clicked on. I Implemented websites, mobile applications, and landing pages from concept through deployment.

COUNTER APP

Jan 2023 - Feb 2023

Simple Counter App is used to count numbers by setting value, Increasing, decreasing and resetting value. I implemented Creation of routes and 404-page, Creation of Error Boundary. I built component for the App using React hooks and I made sure the App had good SEO.
